HW 2 - Twitter Service

Team Name: Spartans
Team Members:

Sanjay Bhargav Madamanchi

Abdul Vahed Shaik

Chirudeep Gorle

Jayanth Vishal Reddy Godi

Sai Pragna Kancheti

Problem Statement:

1.Develop a simple twitter service that implement any Twitter API to to programmatically create, retrieve and delete a Tweet in the Twitter Sandbox environment. e.g., ads-api-sandbox.twitter.com https://developer.twitter.com/en/docs/ads/general/overview/ads-api-sandbox.htmlLinks to an external site.
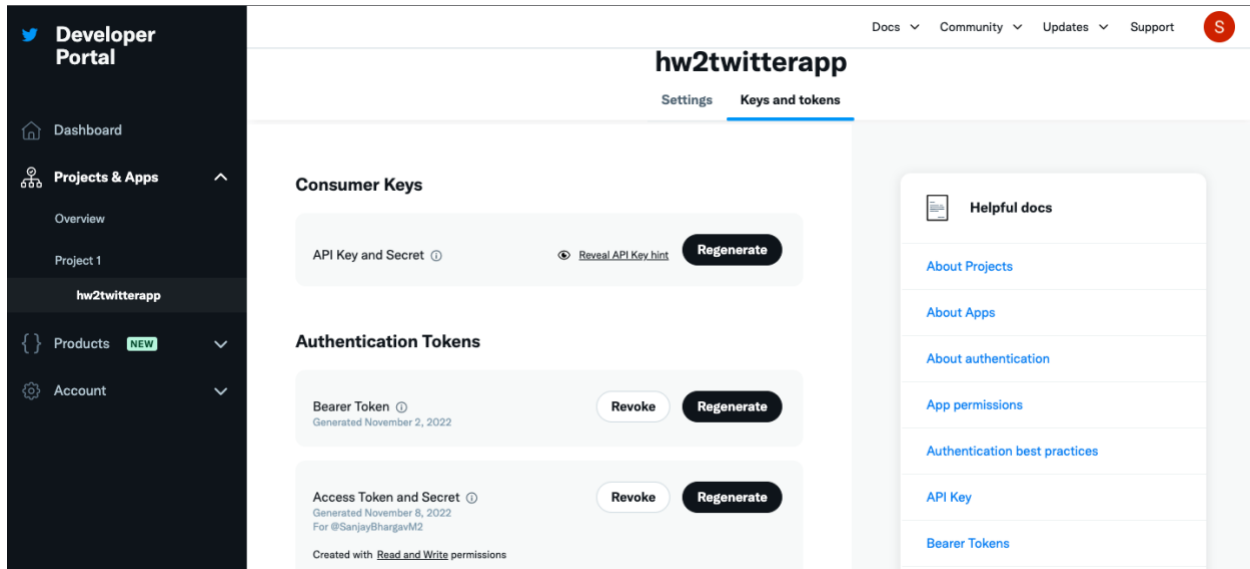

2.Develop a simple Web UI that implements your service and demonstrates the functions.
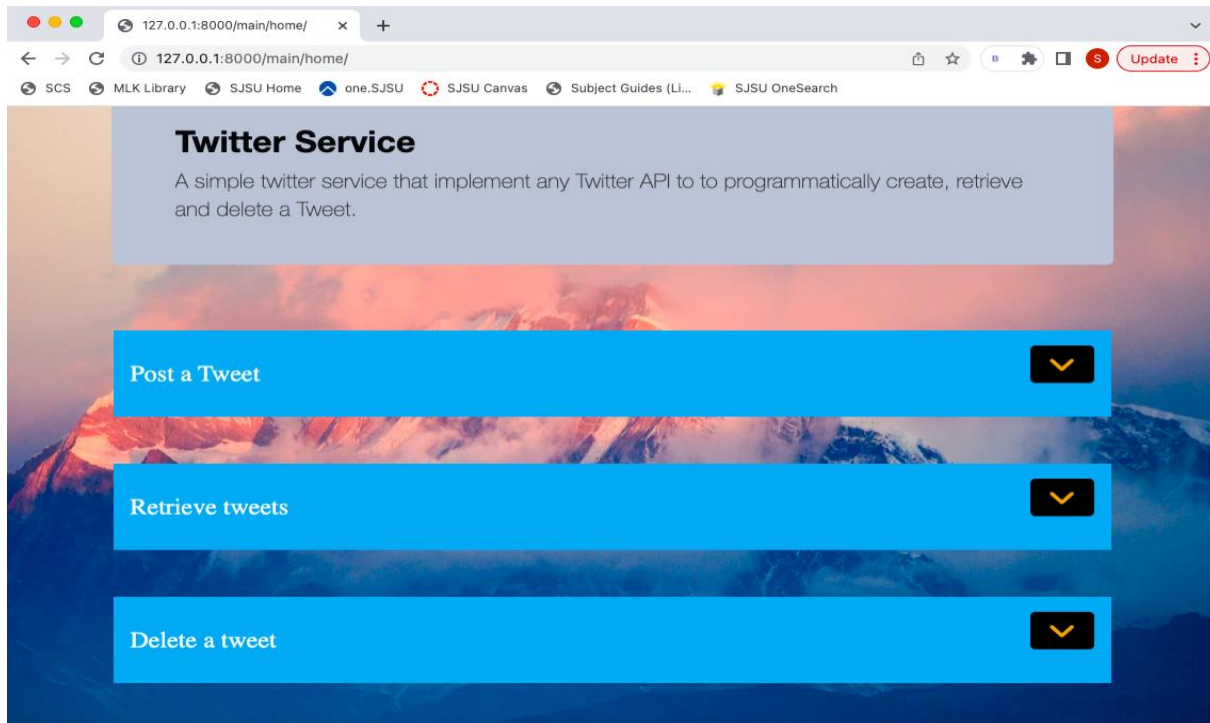

The twitter documentation is here:

https://developer.twitter.com/en/docs/ads/general/guides/getting-started Links to an external site.   https://developer.twitter.com/en/docs/developer-utilities/twitter-libraries
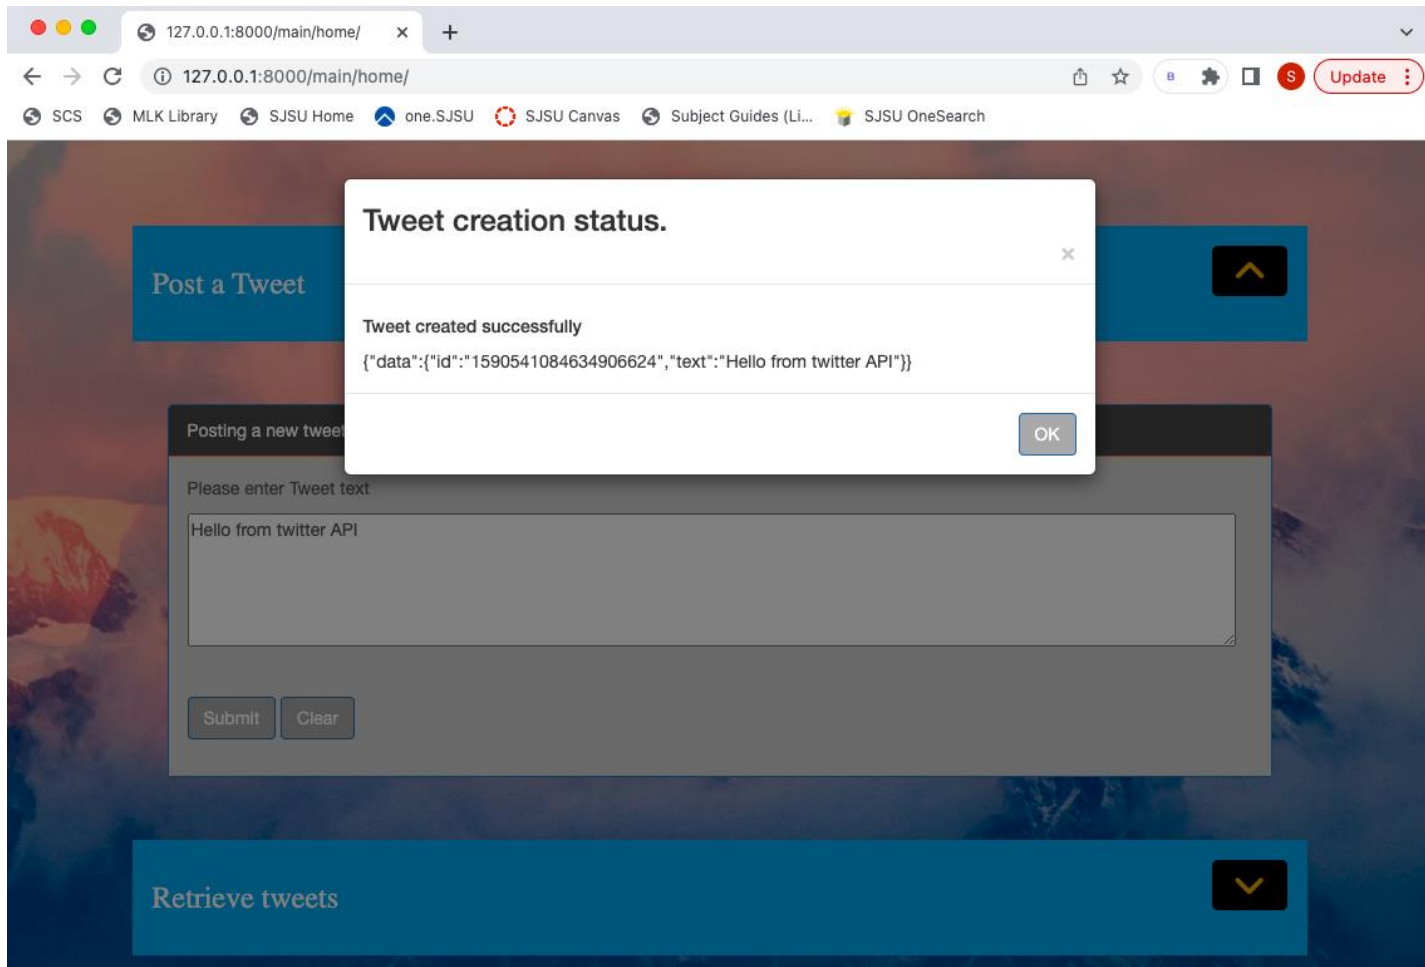

Solution:

Creating a developer account in order to get the keys required for the API features to work for creating fetching and deleting tweets

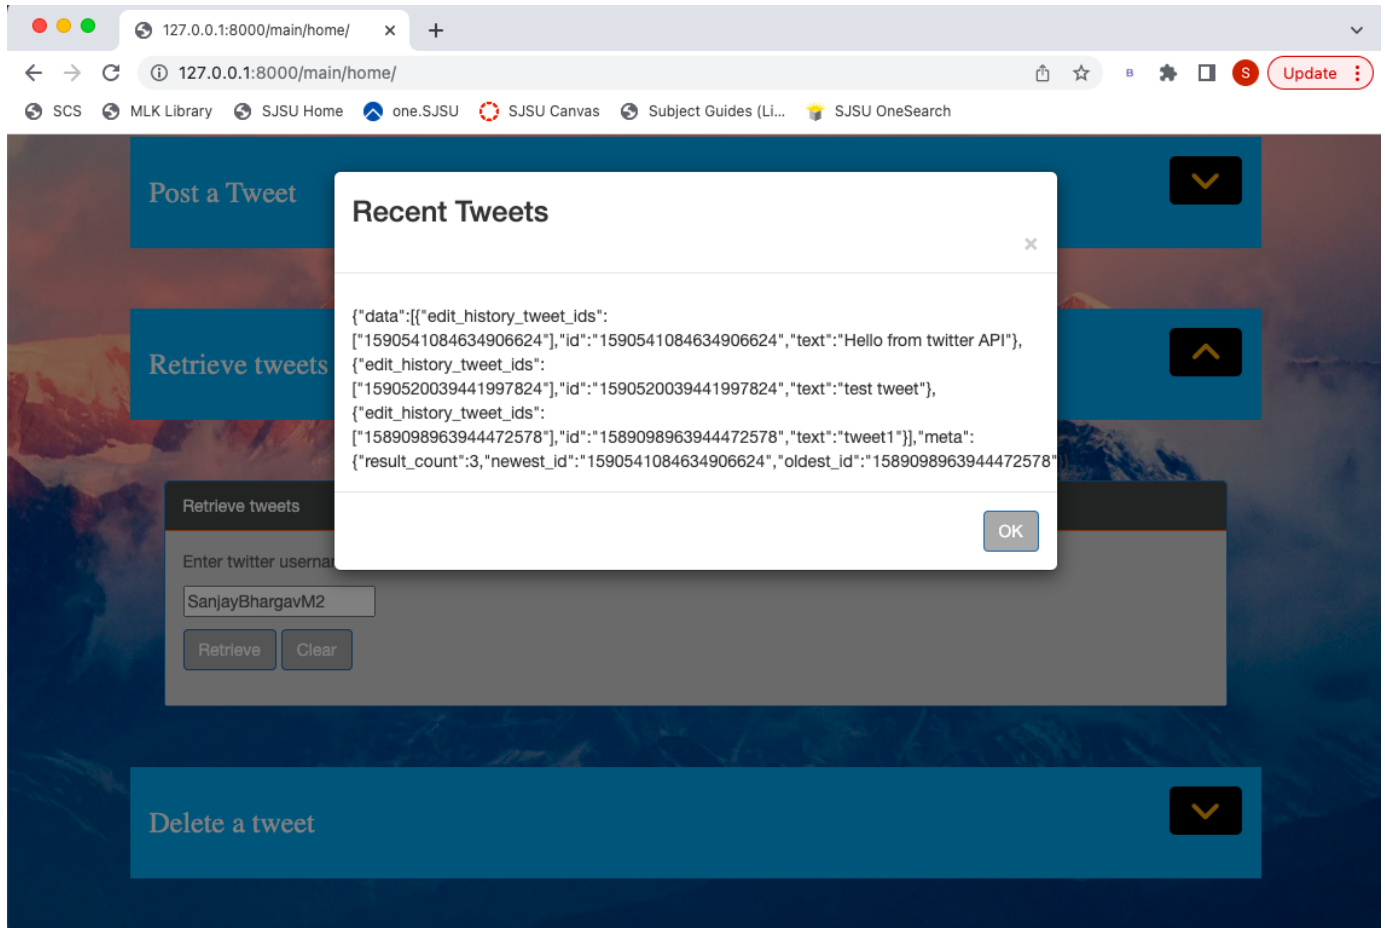

Home page : The home page for twitter service API in order to perform operations

Posting a Tweet:

Retrieve a Tweet: In order to retrieve a tweet we need to provide the username of the user we are trying to fetch

Deleting a Tweet: For deleting a tweet we are providing the id of the tweet we need to delete
